What happens if your restaurant POS goes down?

No Internet? No Problem...

Here's what happens when your restaurant POS goes down...

**What can you do to prevent going down?**

- Ensure your system is secured with a strong password and proper setting of WiFi router.
- Ensure your hardware is connected to your WiFi router.
- Choose a backup system to ensure you're always up.
- If your system is down, check the WiFi connection and hardware.
- Ensure your POS system is able to access the Internet. This can be a problem if your system is using a WiFi connection or if the Internet is down.
- If your computer is down, check the hardware and software settings.
- Develop a problem-solving plan: The first step is to determine the cause of the issue. If the issue is with the Internet, you may need to call your ISP or disconnect and reconnect the router.
- Step back and think about what happened. If you're still having trouble, try restarting the system.
- Take a break if you're not able to fix the problem. Sometimes, simply taking a break can help you see the problem more clearly.

**What happens if you lose connectivity?**

When the payment processor loses connectivity...

- Occasionally, credit card payments can be delayed or rejected.
- Connectivity issues may prevent you from taking payments.

**What happens if you lose internet connectivity?**

- The system will switch to O/f_f.shortline mode.
